

HELPING ENTERPRISES ATTAIN SUSTAINABILITY THROUGH POWER

Improve energy performance through technology and leadership.

Motus Power focuses on delivering efficient national rollouts and multisite deployments for complex energy installations. Motus Power brings an energy strategy to your enterprise and helps you realize the benefits of advanced sustainability.

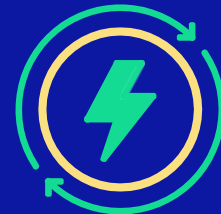

At Motus Power, we bring the advancement of next-generation, energy-saving technology to enterprises and businesses. Motus Power is dedicated to providing cutting-edge energy-saving solutions on a national scale, specializing in turnkey multi-site rollouts. Creating value through hard work, transparency, and experience, we set industry standards in quality, efficiency and integrity. Our customers reduce their HVAC energy consumption by an average of 64% by using Turntide Motors and Motus Power. On top of energy savings, Turntide's disruptive solution helps promote and improve carbon reduction to make your buildings more sustainable. You receive efficiency and savings financially while also environmentally lowering your carbon footprint.

One of the things that makes Turntide's product so unique is that they have invented the first Software-Driven Motor. Turntide improved the Switched Reluctance Motor (one of the oldest and most reliable yet difficult to control motors) and improved it by developing the software needed to control it for modern day applications. The result is a completely optimized motor system that is more reliable, lasts longer, is cheaper to manufacture and maintain, uses substantially less energy, and delivers industry-leading reliability and warranty.

EMPOWERING ENTERPRISES INTO ENERGY CONSERVATION

ADVANCED NEW SAVINGS

ADVANCED NEW ENERGY SOLUTIONS

ADVANCED WAYS TO SAVE THE EARTH SBTi FOCUSED

RETURN ON INVESTMENTS AND LONG-TERM SAVINGS WHEN IT COMES TO ENERGY MANAGEMENT.

The average Energy Star–certified commercial building saves 35% in energy costs. LEED-certified buildings saved owners about \$1.2 billion in energy costs between 2015 and 2018, according to the U.S. Green Building Council. However, how does your business guarantee a return on investment when looking at new energy management solutions?

Not only does Motus Power support your business through the process, but the ROI on our Smart Motor solution has a payback of 1-3 years dependent on typical run times, kWh rate, and available incentives. On top of quick payback, you receive ROI and electric savings long-term with less energy being consumed to operate the motor day in and day out. Motus Power’s services cover everything including installation, project management, consulting, integration and support to make your upgrade painless and efficient so you can realize your return on investment and sustainability more quickly.

With Motus Power, identify areas for new technology solutions that will spearhead your energy management strategy. Using one team, find the right solutions for your business, identify cost-savings areas while transforming your energy consumption, and have a team of project managers to deploy the solution for you.

OUR SERVICES & PRODUCTS

PRODUCTS

- Energy Efficient Solutions
- Electrical and Mechanical Retrofits
- Battery Storage Demand Generation

NEXT GEN TECHNOLOGIES

Motus Power leverages next generation technologies that are in line with your digital transformation and energy savings strategy with products that use IoT & connectivity.

INSTALLATION

Motus Power technicians are prepared to manage high-tech projects according to our customer’s specifications and install devices onsite.

EFFICIENCY SERVICES

Motus Power identifies areas of suboptimal energy efficiency and outline changes, processes and technology to increase savings and get an immediate ROI on your investment.

PROJECT MANAGEMENT

Single Source Provider offering highly trained project managers who tackle the most complex and important projects, while measuring milestones, budget, and time

SUPPORT SERVICES

Receive proactive, expert service for all your technology needs.

CONSULTATION SERVICES

- Technology Refresh
- Infrastructure Assessment
- StrategyTurnkey
- Solution Design

INTEGRATION

In the dynamic world of energy usage, regulatory requirements, and social responsibility all play a driving role in developing an energy strategy for the future

MARKETS SERVED

- Commercial Real Estate
- Retail
- Industrial/Manufacturing
- Public Sector
